

SunWize offers a wide variety of mounting options

Some customers fabricate their own mounts from wood or scrap metal. However, for those who desire documented quality control, SunWize provides a range of alternatives. They include roof mounts, ground mounts, pole modules (both side-of-pole and top-of-pole), rail mounts (as in offshore oil rig rails...or porch rails) as well as tracking mounts. Which mounts to choose depends upon the specific application and customer preferences. Details such as site conditions (e.g. shade, terrain, annual snowfall), size of the array, and structural considerations determine what products to select.

Once you determine what type of mount, the next question is with what material? Mounts can be fabricated from milled aluminum (the most popular), anodized aluminum (for applications in highly corrosive climates such as marine environments), painted steel, galvanized steel, or some combination such as a stainless steel pole collar with milled aluminum module rails.

Mounts are available as fixed racks or as trackers. Fixed racks are stationary. Trackers follow the movement of the sun in order to improve module output for applications requiring the highest efficiency such as water pumping. There are pros and cons to the tracking methodology. As with every aspect of your system, it is best to seek the advice of your SunWize dealer.

SW Adjustable SOP Mount

SunWize®

Universal Side-of-Pole Mount – One Module, Adjustable

Single module side-of-pole mounts are made of 1/8” brushed aluminum and features a module clamping method that eliminates any need to drill additional holes. Mounts consist of a pole saddle bracket and a 0 to 90-degree adjustable mounting arm with tilt indicators. Clamps and bracket include captive stainless nuts for easy assembly, stainless bolts and two stainless band clamps adjustable from 2” to 4” OD poles.

SW OEM 5 SOP Mount

SunWize OEM Module 45° Angle Side-of-Pole Mounts – One Module

11 gauge aluminum mounts are fixed at 45 degrees. Mounting brackets with slotted pattern allows for U-bolt attachment to poles from 2” to 4” diameter, and can also be wall or roof mounted. The small mount includes 2” pipe U-bolt, the larger mount includes two stainless band clamps for 2-4” diameter.

SW Universal Support Structure

SunWize®

Universal Roof/Ground Mount Support Structures

SunWize Universal roof/ground mount module support structures are engineered to endure the harshest environments. They feature a continuous slotted pattern on heavy gauge brushed aluminum channel supporting members. Three rail sizes, 96-1/4", 104-1/2" and 118-1/2" long, allow mounting of any large-framed solar module without the need to drill additional holes, including solar modules by other manufacturers not listed in table below. Simply divide the rail length by the width (inches) of the module to determine how many will fit. All can ship UPS (add 'U' suffix to 118" model).

Flush mount structures (**USF**) include four mounting feet and all stainless steel fasteners. Adjustable tilt models (**USA**) incorporate additional dual-telescoping support legs, infinitely adjustable from 25 to 55 degrees. Our unique captive bolt design in the tilt leg allows for one-handed angle adjustment.
