

EnergyCell™ Nano-Carbon High Capacity

48V Partial State of Charge (PSoC) Energy Storage Technology

- Safe, maintenance-free valve regulated Absorbent Glass Mat (AGM) technology
- Up to 44% improved cycle life in PSoC applications
- Space-saving steel module racking and horizontal cell orientation design
- 3 year full replacement warranty
- Designed for large residential or commercial self-consumption applications

The EnergyCell Nano-Carbon High Capacity battery line provides an ideal solution for larger applications where limited sun hours are available for proper recharging of standard deep cycle batteries.

The Nano-Carbon is an enhanced and optimized negative active material formulation which makes it more than just a carbon additive. The high surface area carbon is a specially formulated additive for improving the negative active material in lead-acid batteries. Carbon increases conductivity and adds additional capacitance to the battery.

Nano-Carbon improves charge efficiency and allows PSoC operation with improved deep discharge recovery.

The included pre-assembled steel racking system allows for ease of installation with a small footprint and front access to all cell connections.
